

Microsoft 365 Copilot

Work Smarter with AI in Your Everyday Microsoft 365 Tasks

4-HOUR PRACTICAL HANDS-ON WORKSHOP

Focus: Outlook • Teams • Word • Excel • PowerPoint • Copilot Chat

About Me

Varun Gupta — Solution Architect | AI Architect | Corporate Technical Trainer

- 14+ years across AI, Cloud, Data & Application Development
- Enterprise architecture, AI solutions & digital transformation
- Industry exposure: BFSI, Healthcare, EdTech, E-commerce

□ Understand → See it working
→ Try it yourself → Apply it to your work

What We Will Cover

01

Understanding Copilot

What it is • Where it fits • What it can and cannot do

02

Working Effectively

Prompting • Context • Refinement • Verification

03

Outlook & Teams

Email • Meetings • Summaries • Actions

04

Word, Excel & PowerPoint

Draft • Analyze • Present

05

Responsible Use & Case Study

Best practices and end-to-end scenario

This Is a Practical Workshop

Not about AI theory. By the end, you will be comfortable using Copilot to summarize emails and meetings, draft communication, analyze data, create presentations, and know when to verify AI output.

~30%

Concepts

~70%

Demo & Hands-On

Concept → Demo → Try → Discuss → Improve

Where Does Our Time Go?

A Typical Morning

-  35 unread emails
-  Multiple Teams conversations
-  4 meetings
-  15-page document to review
-  Excel report to analyze
-  Management presentation to prepare

Traditional

Search → Read →
Understand → Analyze
→ Write → Format →
Share

With Copilot

Ask → Understand →
Create → Refine → Act

Your AI Assistant Inside Microsoft 365

Copilot brings AI assistance into the applications people already use — not a new app, but an assistant embedded in your everyday work.

Outlook

Understand and create communication

Teams

Catch up on discussions and meetings

Word

Create, summarize and improve documents

Excel

Explore and analyze data

PowerPoint

Turn information into presentations

Copilot Chat

Work across Microsoft 365 context

Four Things to Remember

Understand

"Summarize this for me."

Create

"Create a first draft."

Analyze

"What are the important patterns?"

Transform

"Turn this report into an executive summary."

Act

"What should I do next?"

Better Prompt → Better Result

Don't worry about complicated "prompt engineering." Use this simple structure:

Goal

What do you want?

Context

What should Copilot know?

Expectation

What should the output look like?

✗ Instead of:

Write an email.

✓ Try:

Draft a professional email to the project team informing them UAT starts Monday. Ask team leads to confirm readiness by Friday. Keep it concise.

Have a Conversation

Don't search for the perfect prompt — refine iteratively.

📌 **The Copilot pattern:** Ask → Review → Refine → Verify → Use

PART 3 — OUTLOOK & TEAMS

From Email Overload to Action

Scenario: You return after two days to a long customer email chain.

Step 1 — Summarize

Identify decisions made, open questions, deadlines, and actions assigned to me.

Step 2 — Draft Response

Confirm my actions and ask for clarification on unresolved items.

Step 3 — Improve Tone

Refine the draft to match the appropriate professional tone.

Meetings Before, During & After

Before

"Help me prepare. Identify relevant context, open issues and questions I should clarify."

During / After

"Summarize the discussion, decisions and unresolved issues."

Action

"List action items with owners and deadlines. Draft a follow-up message."

 **Demo Scenario:** "I missed yesterday's project meeting. Help me catch up."

Stop Starting from a Blank Page

- Create first drafts
- Summarize long documents
- Rewrite content & change tone
- Improve structure
- Extract information
- Create executive summaries

📄 **Example:** Create a weekly project status report. Then: Rewrite the executive summary for a non-technical audience.

Same Information ≠ Same Communication

Take one project update. Ask Copilot to adapt it for each audience.

Development Team

Technical details + blockers

Customer Version

Progress + impact + next steps

Management Version

Status + risk + decisions required

Learning: Copilot is particularly useful for transforming and adapting existing work.

PART 5 — EXCEL

Start with the Business Question

Instead of asking *"Which formula should I use?"* — start with what you want to understand.

Which regions are below target?

Which products have the strongest performance?

What trends can you identify?

What unusual patterns appear in this data?

Data → Insight → Decision

Don't stop at "Analyze this." Move through four levels of inquiry.

1

1 — What Happened?

Describe the data

2

2 — Where?

Compare regions, products, periods

3

3 — What Should We Investigate?

Identify patterns and anomalies

4

4 — What Requires Attention?

Turn analysis into business questions

From Information to Story

The Scenario

You have a detailed 10-page project report. Management wants a presentation.

Detailed Report

10-page project report with full analysis

Management Deck

6-slide presentation focused on decisions

Suggested Structure

1. Executive Summary
2. Progress
3. Key Metrics
4. Risks & Issues
5. Decisions Required
6. Next Steps

📄 Prompt: "Create an executive presentation from this report. Focus on business impact, risks and decisions."

Don't Think App by App

Think about the **complete business workflow**. Copilot becomes more useful when applied end-to-end.

1

Outlook

Understand communication

2

Teams

Understand meetings

3

Excel

Analyze information

4

Word

Prepare report

5

PowerPoint

Create presentation

6

Outlook

Communicate outcome

A Day with Copilot

Discussion: Where could Copilot save you the most time in your current workday?

PART 8 — RESPONSIBLE USE

Copilot Assists. You Decide.

Always verify important output before using it. Ask Copilot:

"What information supports this conclusion?"

"Separate facts from assumptions."

"What should I verify before using this?"

Always verify: numbers, dates, names, financial data, customer commitments, policies, legal statements, and business decisions.

Before You Use the Output

Check

Is the information accurate?

Verify

Can important claims be supported?

Protect

Am I handling organizational information appropriately?

Review

Is the tone and context appropriate?

Own

Would I be comfortable putting my name on it?

AI-generated does not mean automatically approved.

Put Everything Together

Participants receive:  Email conversation  Meeting information  Business document  Excel dataset

1 Understand

Summarize the situation

2 Identify

Extract decisions, risks and actions

3 Analyze

Review the business data

4 Create & Present

Prepare management update and executive presentation

5 Communicate

Draft stakeholder email

CLOSING

What Did We Learn?

Understand Faster

Emails • Meetings • Documents

Create Faster

Emails • Reports • Presentations

Analyze Better

Data • Trends • Information

Communicate Better

Different audiences • Different formats

Ask → Review → Refine → Verify → Use

📄 Copilot supports your work. **Human judgment remains essential.**

Questions & Discussion

Where can you use Copilot immediately?

Which daily task would you automate or simplify first?

What concerns do you have?

Which scenario would you like to see demonstrated?

Thank You

Work Smarter • Communicate Better • Focus on What Matters

Start with one repetitive task tomorrow and ask: "How can Copilot help me do this better?"
